Hello everyone this is Bernard Sfez your Tiki specialist. In this Tiki Express Tutorial we will see together how we can list our wiki pages in Tiki and the tools that are available there for us. If you like the video don't forget to like, share and subscribe. If you need more information about Tiki, about the work that I do, about open source just check the description down below you will find link there. Let's go !

So I am on the brand new Tiki I'm logged already as admin and on the left menu I can find the "Wiki" item and there the item "List pages". I can see the list of my pages and on the right end you will find a wrench. Clicking on the wrench will reveal the actions menu. On this menu you have a link to edit the page, to copy the page which is a kind of duplicate, to see the full history of your modifications or other contributors modifications on the page. To set up your specific permissions for this page, this object or to remove, delete the page. You have also a search form for the case of you have many pages and you have also check boxes to apply actions on many pages.
